PROFESSIONAL SUMMARY

Recent **B.Sc. Data Science** graduate (2025) and **Data Analyst / BI Developer** with hands-on internship experience designing end-to-end cloud data pipelines (Snowflake, Databricks Medallion architecture, DuckDB), relational star schemas, and automated Power BI reporting. Skilled in advanced SQL (CTEs, Window Functions), Python (Pandas, NumPy, SQLAlchemy), and DAX measures to diagnose operational inefficiencies, uncover revenue leakage, and drive actionable business decisions.

TECHNICAL SKILLS

- Cloud Warehouses:** Snowflake, Databricks (Delta Lake), Azure Synapse Analytics, Microsoft Fabric, DuckDB
SQL & Databases: Advanced SQL (CTEs, Window Functions), MySQL 8.0, PostgreSQL, T-SQL, Spark SQL
Python & Libraries: Python (Pandas, NumPy, SQLAlchemy, Matplotlib, Seaborn, REST API Ingestion, Faker)
BI & Visualization: Power BI, DAX, Power Query, Power Pivot, Star Schema, Dimensional Modeling, KPI Design
Engineering & Tools: ETL/ELT Pipelines, Medallion Architecture (Bronze/Silver/Gold), Advanced Excel, Git/GitHub, VS Code

INTERNSHIP EXPERIENCE

Data Analytics Intern — Cloud Architecture & Operations · Full Stack Academy Feb 2026 – Jul 2026

- Cloud ETL/ELT Pipelines:** Designed and deployed multi-stage data pipelines across **Snowflake, Databricks (Delta Lake)**, and **DuckDB**, ingesting and transforming 1,000,000+ transactional and operational records.
- Automated BI Integration:** Built a custom Python/ODBC connector bridging a macOS MySQL database directly to Power BI, eliminating manual CSV workflows and enabling live dashboard auto-refresh.
- Dimensional Modeling:** Architected relational star schemas, dimension/fact tables, and optimized SQL analytical queries using CTEs and window functions to compute SLA metrics and revenue trends.
- Executive Reporting:** Created interactive Power BI dashboards utilizing advanced DAX measures, dynamic KPI cards, and drill-through matrices to monitor fulfillment performance and support ticket lifecycles.
- Technical Mentorship:** Conducted peer-learning workshops on SQL query optimization, data cleaning best practices, and Power BI visualization standards for incoming cohort members.

KEY PROJECTS

Pharmaceutical Cold-Chain Spoilage & Carrier SLA Recovery Engine 2026

- Snowflake SQL · Python (Pandas, REST API) · Power BI · Statistical Hypothesis Testing
- Engineered a 3-layer Snowflake warehouse (RAW → CLEAN → BUSINESS) modeling 5,000 pharmaceutical shipments joined with real-time weather telemetry from Open-Meteo REST API across 5 major logistics hubs.
 - Surfaced **\$708,550 in YTD spoilage loss** (5.94% spoilage rate) and isolated **\$298,750 in recoverable SLA claims** concentrated across two major 3PL logistics carriers (Delhivery & FedEx).
 - Conducted chi-square hypothesis testing on origin temperature vs. transit delay to scientifically validate risk drivers prior to recommending packaging SOP updates.

E-Commerce Fulfilment Medallion Pipeline & Revenue Leakage Audit 2026

- Databricks · Spark SQL · Delta Lake (ACID) · Power BI · Star Schema
- Built an end-to-end Bronze → Silver → Gold Delta Lake pipeline on 99K+ Brazilian E-Commerce (Olist) records, migrating 90% of business logic and dimensional transformations upstream.
 - Surfaced **\$97.24K in trapped revenue leakage** (8.12% of gross pipeline) in canceled/unavailable orders and isolated a **26-day regional transit bottleneck** in Rondônia vs. 12.3-day national baseline.

CX Support Ticket Lifecycle & SLA Breach Diagnostic Engine 2026

- DuckDB · Python (Faker, Pandas) · Advanced SQL (Window Functions) · Matplotlib
- Constructed a deterministic synthetic pipeline generating **1M orders, 1M support tickets**, and **50K customers** (\$244.8M gross revenue) with byte-for-byte reproducibility.
 - Analyzed ticket lifecycles and classified **49.35% of tickets as high-risk VIP breaches** (\$2,500+ LTV), designing automated escalation routing into a sub-4-hour priority resolution queue.

EDUCATION & CERTIFICATIONS

Bachelor of Science (B.Sc.) in Data Science
Osmania University, Hyderabad, India
Graduated: 2025

- Microsoft Fabric:** Data Flows & Storage (2025)
- SQL for Data Analysis:** LinkedIn Learning (2025)
- Data Analytics Internship:** Full Stack Academy (2026)
- Excel Data Management:** PMI & NASBA (2025)
